DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior art of the record fails to teach or suggest alone or in combination: A communication method for use by a wireless transceiver, comprising: dividing, by dividers said first plurality of upconverters signals into a second plurality of divided signals; weighting, by a second circuit configured to weight, said second plurality of divided signals to form a second plurality of weighted signals, wherein weights used by the second circuitry to weight said second plurality of divided signals are obtained from an eigenvector corresponding to a largest eigenvalue of a cross-correlation matrix; combining, by a combiner, ones of said second plurality of weighted signals to form a third plurality of combined signals; and transmitting said third plurality of combined signals over a plurality of antennas, as recited in claim 7 and in combination with other steps of the claim.

Claims 7-9, 11-13, 45, 48, 51 are allowed over the prior art of the record.

The prior art of the record fails to teach or suggest alone or in combination: A wireless communication apparatus, comprising: dividing elements configured to divide said first plurality of upconverted signals into a second plurality of divided signals; second circuitry configured to weigh said second plurality of divided signals so as to form a second plurality of weighted signals, wherein weights used by the second circuitry to weigh the second plurality of divided signals are obtained from an eigenvector corresponding to a largest eigenvalue of a cross-correlation matrix; and a combiner

configured to combine ones of the second plurality of weighted signals in order to form a third plurality of combined signals that is transmitted through an antenna structure, as recited in claim 19 and in combination with other elements of the claim.

Claims 19-21, 23-24, 44, 46, 49, 52 are allowed over the prior art of the record.

The prior art of the record fails to teach or suggest alone or in combination: A wireless communication apparatus comprising: an RF processing network configured to perform weighting and combining operations in the RF domain upon said first plurality of RF signals to produce a second plurality of RF signals that is transmitted by an antenna structure, wherein RF processing network performs the weighting operations using weights that are obtained from an eigenvector corresponding to a largest eigenvalue of a cross-correlation matrix wherein said RF processing network includes an arrangement of dividing elements configured to divide said first plurality of RF signals into a third plurality of divided RF signals, and wherein said RF processing network further includes: an arrangement of weighting elements configured to weight said third plurality of divided RF signals so as to form a third plurality of weighted RF signals; a combiner arrangement configured to combine ones of said third plurality of weighted RF signals to form said second plurality of RF signals, as recited in claim 33 and in combination with other elements of the claim.

Claims 33, 41, 50, 53 are allowed over the prior art of the record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
